# 📖 Meeting 28/09/2022

D-voting architecture

Setup

Albert made a demo of the setup with 3 nodes.

> ⚠️ run 3 nodes first otherwise it makes a mistake

To be able to create an election we need to add ourself as an admin by modify our code :

In web > backend > src > Server.ts,

- return true in the function isAuthorized in line 178
- in line 164 modify the role to "admin"

We discover some possible bugs :

- bugs will creating an election (probably it's a backend problem)
- will creating an election, refreshing the page causes the lost of all information
